MULTI-PURPOSE SEATING TAKEN TO NEW HEIGHTS

## Interseat is a leading education infrastructure specialist taking a different approach to seating.

*Is your school currently spending excessive time and resources setting up stackable seating for events in your multi-purpose space or school hall? It's not only time consuming but can become an OH&S risk to your staff, not to mention that plastic removable seating is not the most comfortable to sit on.*

Rather than just a place to sit your audience, Interseat believes seating is an opportunity to optimise your facility's multi-functional space and change the way you operate.

Interseat seating systems provide your audience with the viewing experience they deserve, and the flexibility, quality, aesthetic and practicality you need. They specialise in the highest quality products and outstanding customer service that makes them your trusted project partner from initial concepts through to the ongoing service of your completed system. After-service care is a priority, from the first complimentary service, through to all continuing services and backed by a generous warranty.

### **Designing customised compliant multipurpose spaces**

Interseat's retractable seating systems are designed to provide seating when seating is required and floor space when it is not.

This incredible flexibility creates very versatile spaces. There are several different types of units, available including fixed, travelling and mobile. All Interseat's retractable seating systems are custom designed to suit each individual project.

Importantly, retractable seating design requires site specific dimensions to be used in combination with engineering limitations, customer needs and expectations, as well the existing infrastructure on site.

In addition, the design must comply with the National Construction Code - Building Code of Australia - Volume One. Where the Building Code is silent on an aspect of design, Interseat designs are certified to the European Code BSEN 13200-5-2006 Spectator Facilities - Part 5: Telescopic Stands.

This means you can be more than confident that the Interseat team has the expertise and experience to ensure your project meets or exceeds all the relevant requirements.

### **Creating spaces safely and efficiently**

For school assemblies or major events, many schools bring loose seats out of storage and set the seating up in rows. For schools with more than 1500 students, the set-up is extremely time consuming and involves the labour of many members of staff. When events are concluded, the seating must be stacked up again and moved back into storage.

Clearly this is a very time consuming process. Moving seating and stacking seats from heights requires awkward lifting away from the body and poses a high risk of back injury or muscle strain.

Retractable seating and Interseat's auto opening and closing seats, not only eliminate the OH&S risks of manual lifting, but provide a super-efficient system where 1000 seats can be extended and fully utilisable in less than five minutes.

Beaconhills College VIC | 190 seats | retractable system | merlot seat

Kardinia International College has a major multipurpose building that is extensively used for a large variety of school functions. Typically, staff would seat up to 1400 people and the time for setting up and labour involved was a massive tax on resources. Kardinia engaged Interseat to design and install a retractable seating system that would halve their set-up time, reduce labour and at the same time greatly enhance the multi-use options for the space.

*“Interseat has installed an excellent system which is easy to use, is quick to roll out and equally retract back in and looks fantastic. The 727 seat Interseat system has been an outstanding addition to our multipurpose facility.”*

*“We installed a 130 seat retractable seating unit for our assembly hall. The quality of workmanship with this unit is great and the installation process worked smoothly. Ken was very thorough with measurements onsite to ensure the unit would provide the maximum amount of seating and at a cost effective price.”*
